A model of the proposed bridge across the British channel is to be erected over the lake in Bois de Boulogne. In constructing the channel bridge, the piers are to be floated to the appointed spot, and then the buoys being withdrawn, they fall into their position. Each pier is armed with telescopic screws of enormous etrength, which are worked into the bed. The piers are so constructed that water pours through them with little resistance; and each pier is provided with a staircese; up which; should vessels run foul of them, the crew could run and go home by railroad.

A gentleman once asked, "What is woman?" When a married man replied, "She is an essay on grace, in one volume, elegantly bound. Although it may be dear, every man should have a copy of it."
